Grade	**10.00** out of 10.00 (**100**%)

Question 1 | Correct Mark 1.00 out of 1.00

Convert the following algorithm into a program and find its time complexity using counter method.

```
void reverse(int n)
{
   int rev = 0, remainder;
   while (n != 0)
    {
        remainder = n % 10;
        rev = rev * 10 + remainder;
        n/= 10;

    }
print(rev);
}
```

Note: No need of counter increment for declarations and scanf() and count variable printf() statements.

Input:

A positive Integer n

Output:

Print the value of the counter variable

Answer:

```c
#include <stdio.h>
void reverse(int n,int*c){
   int rev = 0, remainder;
   (*c)++;
   while (n != 0) {
       (*c)++;
       remainder = n % 10;
       (*c)++;
       rev = rev * 10 + remainder;
       (*c)++;
       n/= 10;
       (*c)++;
    }
    (*c)++;
    // printf("%d",rev);
    (*c)++;
}
int main(){
    int n,c=0;
    scanf("%d",&n);
    reverse(n,&c);
    printf("%d",c);
}
```

	Input	Expected	Got	
✔	12	11	11	✔
✔	1234	19	19	✔

Passed all tests! ✔

Correct

Marks for this submission: 1.00/1.00.
